

What is Blue Tree NZ?

[Blue Tree NZ](#) is Roche's platform for Cost Share Programmes (CSPs). This digital platform provides a seamless pathway to care coordination for patients registered for CSPs from enrolment through to oversight of payment, dosage caps and treatment cycles.

The clinician, pharmacist, nurse, centre coordinator and other support staff can share care-coordination of the patients at their centre. At enrolment, the patient and/or their caregiver receives an invitation to register to the portal to view their own personal, clinician and treatment details.

The Roche CSP Coordinator can view minimal patient personal information. They are only able to view their full treatment details, provide support to users of the platform, and ensure that medicine is ordered and received in due time for patient treatment.

How do I access Blue Tree NZ?

The [Blue Tree NZ](#) website is only accessible in New Zealand (it is geo-locked). If needed, coordination of care while a doctor is travelling can be delegated to another doctor in the centre. This ensures greater protection for the online platform.

Doctors can access Blue Tree NZ using their [RocheHub](#) credentials. Registration is simple and if issues arise please email nz.costshare@roche.com. Doctors can see all their patients in Blue Tree, across the centers at which they work.

Pharmacists, nurses, centre coordinators and other support staff, eg finance managers, are provided access by the Roche CSP Coordinator. Please send individual email and business details to nz.costshare@roche.com. This role can see all doctors and patients associated with their centre.

Patients receive two system emails when their enrolment is finalised. The first provides them with a confirmation of enrolment and the CSP Terms & Conditions. The second is an invitation to register and view their own details, their clinician and centre information, as well as their CSP and treatment journey.

What information do I need to enrol a patient?

At enrolment, three unique patient identifiers are required: initials, date of birth and email address. If a patient is under 20, caregivers details are also required.

Patient initials and date of birth are the only identifiers visible to the Roche CSP Coordinator. The email address is required as a 3rd unique system identifier (but not visible). This also enables the patient to receive their CSP enrolment letter (an arrangement between Roche and the patient, coordinated by the patient's healthcare professionals), and have to option to access Blue Tree as a patient.

Care coordinators may choose to include other information about their patients as Blue Tree NZ may act as a repository of patient data for your practice. Their personal information is protected - see our [Privacy Notice](#) for more details.
